Backend Software Engineer

Backend engineer with hands-on experience building secure, real-time, and production-grade systems using Python, TypeScript, and PostgreSQL. Focused on microservice architecture, API design, and high-availability systems. Currently completing a B.Sc. in Computer Science and Mathematics. Proven ability to ship reliable, well-architected services.

Education

Mountain Top University, Ogun State, B.Sc. Computer Science and Mathematics Sept 2022 - present

Relevant Coursework: Machine Learning, Databases, Computer Networking & Communication, Discrete Math, Data Structures & Algorithms, Computer Architecture & Organisation, System Analysis & Design.

Software Development Lead, MTU STEM Community

- Led technical workshops and mentored 15+ student members on backend development, version control, and collaborative engineering practices.

Projects

Convo

Secure, real-time chat application with advanced room functionality and WebSocket integration

- Architected a microservice-style backend with NestJS, Prisma, and PostgreSQL for session management and event-driven message queuing across concurrent chat rooms
- Built Next.js frontend with WebSocket integration for sub-100ms messaging and JWT-secured API endpoints; supports 200+ concurrent connections
- Designed for high availability with Redis-backed session resilience across concurrent multi-room connections

Course Registration API

Async REST API for academic course registration built with FastAPI and PostgreSQL

- Built with FastAPI, Uvicorn (ASGI), and Prisma ORM (prisma-client-py) with a PostgreSQL backend
- Designed relational schema for Students, Courses, and Registrations with foreign key constraints and uniqueness enforcement
- Implemented async route handlers for all CRUD operations with full conflict detection and structured HTTP error responses
- Used Pydantic schemas for request validation and response shaping, including nested relational data across domain modules

Skills and Technologies

Languages: Python, Go, TypeScript, JavaScript, React/Next

Frameworks: Node.js stack (Express, Nest.js), Django, FastAPI

Infrastructure & Cloud: Docker, Amazon Web Services (AWS)

Databases & Other: PostgreSQL, MySQL, MongoDB, Redis
